## **Preface**

The subject of the development and implementation of ICT is a source of many scientific considerations. On the other hand, investing in modern ICT solutions is one of the main directions of organizational improvement.

Therefore, the subject of management systems is still current and an important topic of publications. The editors would like to thank the authors for the submitted articles and those still to come, thanks to which the magazine is alive and developing.

An extremely valuable feature of the Business Informatics series is the fact that the studies contained in it are presentations of various approaches and points of view on the application of modern ICT solutions. The perspectives and views presented by the authors often allow the readers to broaden their own reflections related to the created view on the possibilities and directions of the application of information and communication technologies in economic practice.

It is also important to add that not all the contributions sent for publication meet the formal and substantive requirements. This further increases the significance and value of the articles which have received double positive reviews and were selected for publication in this issue of Business Informatics.

Currently, as a result of a multistage and strict formal and substantive verification of our journal, approximately 25% of the texts submitted are accepted for publication.

The editors of this issue would like to express their gratitude to all the authors who wanted to share their experiences and opinions. In addition, they would also like to thank the reviewers for their insightful and factual assessments of the submitted works.

*Iwona Chomiak-Orsa, Zdzisław Pólkowski*
